The crushed grass exudes the stench of fear and blood. Weapons clash, voices scream, dust rises and hides anonymous faces. Under a leaden sky, the earth trembles to the rhythm of forced steps and falling bodies. In the distance, a horn sounds, and hope clings to the edge of the next sword.

Welcome to BATTLES & SIEGES, a new supplement from Xiphos Games Studio for FORBIDDEN LANDS. In this book, you will find a complete rules expansion for simulating both open-field battles and fortress sieges in greater detail.

Although warfare is not a common occurrence in the Forbidden Lands, so sparsely populated and impoverished, it can still occur eventually, even if only as small skirmishes. In such circumstances, a detailed set of battle rules can prove immensely helpful.

What is explained in the Stronghold chapter is enough, functional, and does not aim beyond the basics needed to run a convincing battle in terms of rules. Nonetheless, we understand that you can build upon that foundation without overly complicating the game mechanics. With that goal in mind, we have developed this supplement.

If you wish to prepare armies and battlefields more thoroughly and convincingly, as well as make fair distinctions regarding the preparation, tactics, and strategies of war, this is the book you need. We have also added a touch of drama and involvement on the part of the Player Characters in the heat of battle, allowing them to decisively influence the outcome. All of this is done without making the system overly complex or deviating from the familiar dice mechanics to which we are accustomed.

ADDITIONAL RULES

In this chapter we will explain the rules we have added that pertain strictly to the development of a battle or a siege: game time, order of battle, battle phases and dice rolls.

UNITS

Having explained the rules for battles, we now delve into the units participating in these conflicts, their traits, strengths, and weaknesses, and finally how they are recruited by the various sides in a war.

STRONGHOLDS

After exploring the additions, we focus on the characteristics of strongholds, though only from the standpoint of their effects on battles: their functions, resource management, and survival during sieges.

BATTLE EVENTS

Finally, we present a series of battle events under different circumstances to grant greater importance to the presence of key individuals, allowing them to be decisive in the course of a battle.

ADDITIONAL RULES

The banners, torn by arrows and swords, barely wave their colors stained with dust and blood. Soldiers with ashen faces move like broken puppets, trying to maintain formations that fear and fury destroy at every moment. A horn sounds in the distance, an uncertain promise of help or defeat. At ground level, the metallic taste of death permeates every breath.

No good leader would ever wish to resort to the battlefield to resolve a dispute, yet it happens more often than one might expect. To address these complex scenarios filled with action and drama, we have expanded the original rules to achieve a more strategic and enjoyable simulation.

In this chapter, we will explore all aspects of battles from a broad, distant perspective, viewing their unfolding and conclusion from afar, so that in subsequent chapters we can delve deeper into the details of those who are bleeding in the heat of combat.

GAME TIME

As in the original rules, battles are resolved in 15-minute increments, meaning each die roll represents what occurred during one turn.

At the end of each turn (after applying any modifiers corresponding to decisions and events), the opposing sides will each make a roll for each part of their order of battle, for a total of three rolls.

If it becomes necessary to focus on what happens to one or more particular characters, the flow of time shifts back to normal combat rounds.

ORDER OF BATTLE

Battles are fought by two or more sides, each presenting itself to the enemy in a predetermined order planned by its commanding general.

Armies have an order of battle that involves organizing their forces into **LINES** and **SECTIONS**, which play a fundamental role in the development of the battle and the rules system.

ARMY LINES

In essence, lines represent the depth of an army on the battlefield. They allow for staggered tactics, covering fronts in response to enemy movements, situation assessment, adaptability by the commanders, and providing relief for those exhausted by combat, as well as protecting the rear. Primarily, however, this setup prevents dozens or hundreds of warriors from crowding the front line, which would be chaotic and counterproductive.

Since the maximum number of dice an army can gain from its total number of troops is +5, any units beyond that point should be placed in a second line of battle, or a third if there are still more leftover units, and so forth. Thus, if every 20 soldiers grants +1 die, once you reach 100 soldiers (the maximum +5), the excess should form a new line until reaching another 100 soldiers. If this logic is not

entirely clear yet, it will become simpler once all the rules are explained.

In terms of rules, any lines behind the first (that is, not in the vanguard) are considered not directly involved in the battle, and therefore are not counted in each side's roll (again, you can only apply a maximum of +5 due to troop numbers).

Given the relatively small army sizes in the Forbidden Lands, it's likely that few sides will be able to field more than one line in a battle, especially considering that each line is divided into sections.

BATTLE LINE SECTIONS

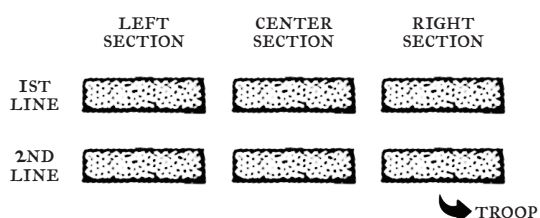

Each battle line of an army is divided into three sections: left, center, and right. Each turn of the battle, both sides roll once for each section, resulting in a total of three rolls per turn.

Considering that, as stated, the maximum number of dice a side can gain from the number of troops is +5 (100 warriors), each section can apply this +5 separately. As a result, a full battle line of an army can have a maximum of 300 soldiers (100 per section of a line). The group of soldiers making up a single section of a line is called a TROOP.

Under normal conditions, each section of an army faces off against the corresponding enemy section. However, due to a lack of warriors or one section's victory over another, this can change as the battle progresses. In such cases, sections will attack the nearest enemy section, enjoying a clear numerical advantage. Other than that, the rules remain exactly the same.

TROOPS REPLACEMENT

As a troop's soldier count diminishes, one might think that rear line troops would fill in these gaps with fresh warriors. But this usually doesn't happen in reality.

In real battles, it is more orderly and efficient to replace one entire troop with another rather than swapping individual soldiers. Frontline troops withdraw to make room for a fresh, fully intact troops. If necessary, they can regroup in the rear to form a new troops with the remaining soldiers.

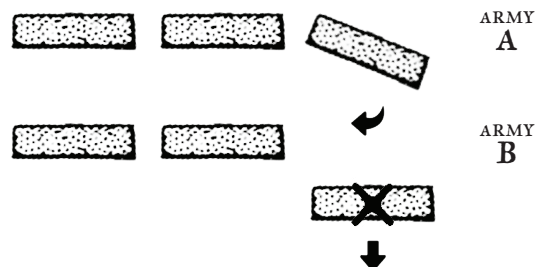

To clarify this procedure: you cannot compensate for the loss of 20 soldiers (equivalent to +1 die) by adding 20 soldiers from another troop in the rear. Such specific movements would disrupt the different formations and chains of command, essential for maintaining effectiveness in battle.

The real decision is how long a troop should remain fighting before being replaced by another. This is determined by the army's general or the troop's commander, if they have that authority.

If a frontline troop is defeated, flees, or is replaced, the next troop in the rear should take its place in the following turn. If the army has no secondary line, that section remains empty, allowing the enemy section to attack the nearest section instead.

TROOP REGROUPING

A troop can stop fighting for one of three reasons: being defeated, fleeing due to demoralization, or receiving an order to withdraw. In the first case, the troop has been destroyed and no longer has warriors capable of continuing the fight or even escaping. However, in the case of fleeing or withdrawal, troops can regroup in the rear.

The left section of Army A forces the right section of Army B to flee and then faces the central section's unit with a two-to-one advantage.

The rules related to troop withdrawal, regrouping, and morale will be explained in detail later. For now, it should be clear that those troops that have lost their place on the front line may return to battle under certain circumstances, and the dice corresponding to their soldiers can be redistributed.

TROOP UNIFORMITY

Although every Forbidden Lands army includes soldiers with slight differences in their equipment and skill, troops should be composed of warriors who share the same general characteristics.

For example, a single troop can only be made up of infantry units with similar gear and level of training. If there are mounted units in the same army, they must form their own separate troop rather than being mixed in with infantry troops.

TROOP DICE

In each turn of a battle, the clash between troops is resolved with a dice roll. Each troop engaged in combat is entitled to one roll per turn.

To determine the dice a troop can roll, we need to know its composition as well as any orders it may have received.

BASE DICE

BASE DICE are determined by the number of units that make up the troop. The number of units required to gain +1 die depends on the **TYPE** of troop. Since the maximum number of base dice a troop can have is 5, its type also determines the maximum number of soldiers it can contain.

You can easily determine the types of troops and the number of units they consist of using the **TYPES OF TROOPS** table.

INFANTRY: In the Forbidden Lands, infantry troops are the most common in all armies. They are soldiers who fight on foot in close combat.

TYPES OF TROOPS		
TYPE	QUANTITY	COST
Infantry	20	5
Skirmishers	20	5
Chivalry	5	25
Monster	1	0

SKIRMISHERS: Skirmishers are troops that attack their enemies from a safe distance using bows, crossbows, slings, or javelins. Their main advantage lies in their effectiveness at range, but they are highly vulnerable if forced into melee combat.

CAVALRY: Cavalry troops consist of mounted soldiers who typically engage in close combat, benefiting from their height advantage and the power of their mounts. However, they can also harass their enemies with ranged weapons, taking full advantage of their mounts' superior mobility.

MONSTER: Monsters in the Forbidden Lands vary greatly, but this category only includes those with monster attacks and significant size. Creatures that function as standard characters (such as skeletons or ghouls) are placed in one of the previous troop categories.

COST: This represents the daily cost in copper coins to keep each unit of the troop fed. This amount doubles if the unit is also paid a salary (which is uncommon; otherwise, the promise of reward is based on plunder).

ADVANTAGE DICE

Troops have specific advantages in combat, represented by their **ADVANTAGE DICE**. Each qualifying characteristic grants +1 advantage die, up to a maximum of +5.

However, these extra dice can never exceed the modifier granted by the troop's **BASE DICE**. For example, if a troop has 3 base dice, its advantage dice cannot exceed 3, regardless

ADVANTAGE DICE

A troop gains the indicated dice for each listed advantage it possesses. The total number of advantage dice cannot exceed the troop's base dice.

ADVANTAGE	DICE
Well-Trained Units	+1
Orc or Dwarf Infantry	+1
Demon or Misgrown Infantry	+2
Elven Skirmishers	+2
Religious, Racial, or Regional Fervor	+1
Includes an Important Character	+1
Larger Units	+1
Flanking Attack	+1
Rear Attack	+2
Fighting for Survival	+1

of the number of advantages it possesses.

Remember, troops must consist of units with similar characteristics, meaning all or most soldiers in the troop should share the same advantage to apply each **ADVANTAGE DIE**. If a specific advantage cannot reasonably apply to all units, you should either separate them into different troops or not apply the advantage.

WELL-TRAINED UNITS: Soldiers who have undergone at least three months of training or dedicate their lives to combat are considered well-trained. These troops consist of professional warriors, such as mercenaries or guards, or units whose prestige or social standing is tied to their martial prowess.

ORC OR DWARF INFANTRY: It is widely known that both orcs and dwarves possess exceptional strength and resilience, allowing them to perform better than average under the grueling conditions of battle.

DEMON OR DEMORPH INFANTRY: These beings are the most terrifying infantry units on the battlefield, possessing supernatural qualities that make them significantly stronger, more unpredictable, and far more fearsome.

ELVEN SKIRMISHERS: Elves possess exceptional vision and dexterity, making them outstanding archers.

RELIGIOUS, RACIAL, OR REGIONAL FERVOR: This advantage die is granted to a troop with a particular motive that increases its fervor in battle, resulting in superior performance. Examples include religious missions, deep-seated hatred, or pride tied to racial or regional causes. Minor rivalries are not sufficient to grant this die, it must stem from an exceptionally high fervor, such as the Rust Brothers' zeal against heretics.

INCLUDES AN IMPORTANT CHARACTER: The troop includes one of the story's important characters. This applies not only to PCs but also to important NPCs, including antagonists on the enemy side.

LARGER UNITS: A troop attacking one composed of smaller units receives a bonus. This often occurs when cavalry faces infantry or when monsters fight against smaller beings.

FLANKING ATTACK: Troops most commonly flank an enemy when they have won their section of the battlefield and can turn to attack others. Other narrative circumstances may also allow for flanking.

REAR ATTACK: When an enemy troop is engaged with another, it is possible to attack it from the rear with a special maneuver.

FIGHTING FOR SURVIVAL: When cornered, even animals become more dangerous. If soldiers are fighting for their lives against certain annihilation, they gain a fervent boost to save themselves from death.

WEAPON TYPE

The following effects apply based on the weapons used by the units in the troop.

WEAPON	DESCRIPTION	EFFECTS	COST
Unarmed	A unit with no weapon other than their bare fists.	Attacks second.	0
Natural Weapon or Short Weapon	Claws or another natural weapon with lethal potential. Also includes daggers.	Attacks second. Attack +2 vs polearms.	0
One-Handed Weapon	Includes most swords, axes, hammers, and any short weapon, including spears.	---	0
Two-Handed Weapon	Short but heavy weapons that must be held with both hands, such as greatswords and heavy hammers.	Attack +1 vs Infantry and Skirmishers.	10
Polearm	These are polearm weapons like long spears, halberds, and pikes.	Attacks first. Attack +2 vs cavalry. Two-handed.	5
Thrown Weapon	Weapons that can be thrown, such as javelins and throwing axes.	A free attack before engaging in combat. Attack +1 vs cavalry.	5
Light Ranged Weapon	Refers to shortbows and slings.	Range 1. Two-handed. Attacks second. Demoralized in melee combat.	5
Longbow	A weapon with great range and penetration.	Range 2. Two-handed. Attacks second. Demoralized in melee combat.	10
Crossbow	An expensive and slow weapon with exceptional piercing power.	Range 1. Attack +1. Attacks second. Two-handed. Demoralized in melee combat.	10

WEAPON TYPE

The equipment of a troop is a fundamental aspect to consider on the battlefield, as it defines its combat capabilities against enemy units. Each troop possesses a specific weapon type chosen from the possible options in the WEAPON TYPE table.

COST: Weapon types add an additional cost to the unit. This amount, expressed in copper coins, is added to the base maintenance cost of the unit type. For example, an infantry unit with a polearm will cost 10 copper coins per soldier (in a troop of 100 soldiers, 1,000 copper coins per day). Maintaining an army is no cheap endeavor.

ATTACK +X: Some weapons provide a bonus to the troop's attack, usually conditional based on the weapon or the type of enemy unit they are facing. These dice are added as if they were Advantage dice, but they can exceed the base dice limit.

ATTACKS FIRST: This is a significant advantage in combat, allowing the troop equipped with this weapon to roll their combat dice first, potentially inflicting casualties on the enemy before they can roll. If two troops have weapons that attack first, the effect is canceled, and both roll their dice simultaneously.

ATTACKS SECOND: A major disadvantage that forces the troop to always wait to roll their dice until after their enemies have rolled, suffering casualties before they can inflict any. Note that this effect only applies to melee combat.

FREE ATTACK: Before engaging in melee combat, the troop can make an attack without the enemy troop being able to retaliate. It also does not suffer any morale-based casualties. This attack can be made either when approaching the enemy or when the enemy approaches them. This

ability can be acquired more than once, but it can only be used once per battle for each instance acquired. This effect is resolved in the same turn that the troops engage and make their normal attack rolls.

RANGE: We want to keep the flow of battles abstract, including troop movement and distances. However, we emphasize the advantage of ranged weapons with the Range effect. This allows troops with such weapons to attack the enemy before that enemy troop can strike. In a way, this effect can be understood as adding extra battle turns before the enemy reaches close combat. With Range 1, one additional turn is added before the front line can attack; with Range 2, two turns are added. Troops with these weapons cannot attack the enemy's rear lines and do not suffer morale losses from these attacks. Any troop with these weapons is considered a Skirmisher unless mounted.

TWO-HANDED: Two-handed weapons prevent the units in the troop from carrying shields or throwable weapons.

DEMORALIZED: This effect means that the troop cannot use Morale Points to avoid suffering morale-based losses. This effect applies in certain circumstances,

especially when a troop equipped with ranged weapons is forced into melee combat.

PROTECTION TYPE

In Ravenland, most units brought to battle wear simple linen clothing and carry a cheap yet effective weapon, such as a spear. This is due to the limited resources available to leaders and armies. These troops fall like flies when facing better-equipped troops capable of effective defense. Protections are expensive, reserved for the most privileged warriors, but they significantly increase effectiveness in battle.

PROTECTION X: These are the extra dice provided by armor or shields when defending against an attack. Sometimes they are conditional, depending on the type of weapon the units are resisting. The troop can always roll their protection dice, even when not in direct combat, to avoid taking losses.

MORALE +X: Increases the troop's starting Morale in battles due to the sense of security provided by their protection.

PROTECTION TYPE			
The following effects apply based on the protections used by the units in the troop.			
PROTECTION	DESCRIPTION	EFFECTS	COST
Small Shield	A defensive weapon that covers the forearm, made of wood or steel.	Protection 1. Protection 2 vs projectiles.	0
Large Shield	A shield that provides broad coverage for the arm and torso.	Protection 2. Protection 3 vs thrown weapons. Protection 4 vs projectiles. Morale +1.	5
Leather Armor	Corresponds to leather and studded leather armor. Includes a cap or helmet.	Protection 2. Morale +1.	5
Chainmail	Made of interlocking metal rings. Includes an open helmet.	Protection 4. Protection 2 vs projectiles and polearms. Protection 1 vs blunt and thrown weapons. Morale +2.	10
Plate Armor	Complex armor crafted from steel plates. Includes an open helmet or a great helm.	Protection 6. Morale +4. Slow 1.	25

SLOW X: Increases the Range of units with this weapon effect, as the troop moves more slowly due to their heavy gear.

battle, including the exact location and the advantage of positioning their troops after seeing those of the enemy. Ties are resolved with another roll.

If the sections are extended as mentioned earlier, this must be clarified before the generals' roll, it should not come as a surprise to either side.

BATTLE SEQUENCE

It's time to address the sequence of a battle according to the new rules in this book, from troop deployment to troop combat, and finally, the retreat of the defeated army.

BATTLE PREPARATIONS

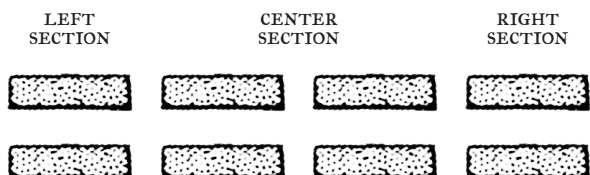

First, you must organize your troops, dividing your units into groups of the same type (infantry, cavalry, skirmishers, or monsters), preferably with the same advantages. If, for any reason, you need to group units with different advantages, those dice do not count and are lost, at least until the condition is met.

The exception to this rule is the case of **IMPORTANT CHARACTERS**, as they act as the commander, hero, or leader of the troop. However, in this case, the character sacrifices all their traits to provide the troop with an extra die.

Once the troops are organized (which you likely already had prepared in advance), you must position them on the battlefield, assigning them to the left, center, and right sections, and placing them in the necessary ranks.

There may be cases where armies are so large that it makes sense to deploy more than one troop per section. In such cases, both generals should have the opportunity to place the same number of troops per section. This is recommended if an army exceeds two ranks in its order of battle.

The order in which the armies are positioned on the battlefield is determined by an **INSIGHT** roll from the generals. The winner of this roll sets the conditions of the

GENERAL'S SPEECH

Once the armies are assembled and facing off for battle, the generals deliver their speeches to motivate their warriors. The speech consists of a few words or a short address, followed by a **PERFORMANCE** roll. The successes rolled grant the army's troops an equivalent amount of **MORALE POINTS**.

These speeches, especially those affecting armies with PCs involved, should be roleplayed in some way to create a memorable and warlike atmosphere for the battle, particularly if a PC is leading the army. While no one expects to be a medieval military leader, making an effort to set the tone before a dramatic slaughter would add an interesting element to the campaign.

It is entirely possible to push the roll to gain more successes and further increase the troops' morale. Keep in mind that Morale Points are crucial for keeping troops fighting and preventing them from fleeing (or suffering morale-related casualties).

If a character is a competent commander but lacks the charisma to rally the troops, it may be best for them not to assume leadership of an army.

BATTLE TURNS

As previously mentioned, battles unfold over several turns (15 minutes each). During each turn, troops attack and are attacked, rolling dice to inflict damage and defend against it.

During a turn, orders may be given, and various actions or events may occur. At the end of each turn, dice are rolled after accounting for the troop's current situation in the battle.

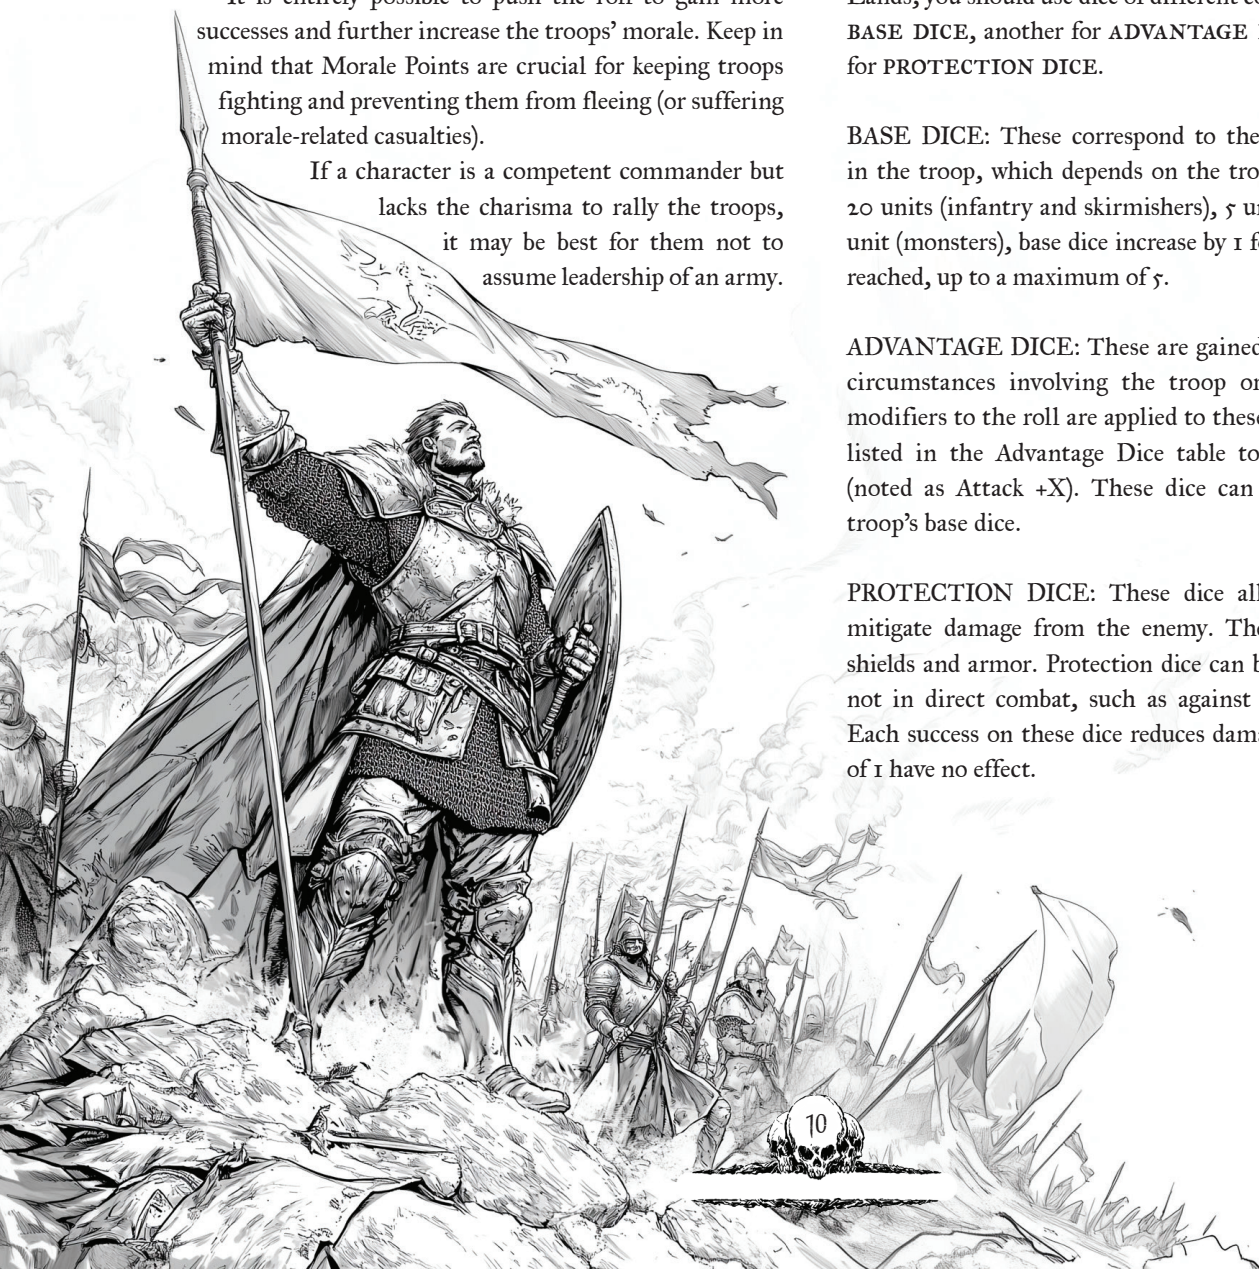

TROOP DICE

Each troop has a set of dice determined by its characteristics and equipment. As with standard characters in *Forbidden Lands*, you should use dice of different colors: one color for **BASE DICE**, another for **ADVANTAGE DICE**, and a third for **PROTECTION DICE**.

BASE DICE: These correspond to the number of units in the troop, which depends on the troop type. Whether 20 units (infantry and skirmishers), 5 units (cavalry), or 1 unit (monsters), base dice increase by 1 for every threshold reached, up to a maximum of 5.

ADVANTAGE DICE: These are gained through specific circumstances involving the troop or the battle. Any modifiers to the roll are applied to these dice, from those listed in the Advantage Dice table to weapon bonuses (noted as Attack +X). These dice can never exceed the troop's base dice.

PROTECTION DICE: These dice allow the troop to mitigate damage from the enemy. They are granted by shields and armor. Protection dice can be used even when not in direct combat, such as against projectile attacks. Each success on these dice reduces damage by 1, and rolls of 1 have no effect.

BATTLE ROLL

At the end of each battle turn, troops in combat combine their base dice, advantage dice, and protection dice and roll to determine successes. Under normal circumstances, all troops in combat roll their dice simultaneously, unless a ranged attack, Attacks First, or Attacks Second effect is in play.

To maintain order, add drama, or simply for practical purposes, it is often best to resolve each troop clash separately. The concept of simultaneous rolls reflects that both troops attack and defend at the same time, causing casualties simultaneously.

BASE SUCCESSES: Successes from base dice inflict 1 point of damage on the opposing troop. Each point of damage reduces the enemy troop's base dice by 1, representing the death of enemy units unless blocked.

ADVANTAGE SUCCESSES: Successes from advantage dice are compared with the enemy's, canceling each other out. Any remaining successes for one side inflict 1 point of damage on the opposing troop for each success.

PROTECTION SUCCESSES: Each success on protection dice cancels 1 point of damage that the troop would have otherwise received from the roll.

DEMORALIZATION: Rolls of 1 on base dice indicate a loss of morale for that portion of the troop, potentially driving them to flee.

MORALE POINTS

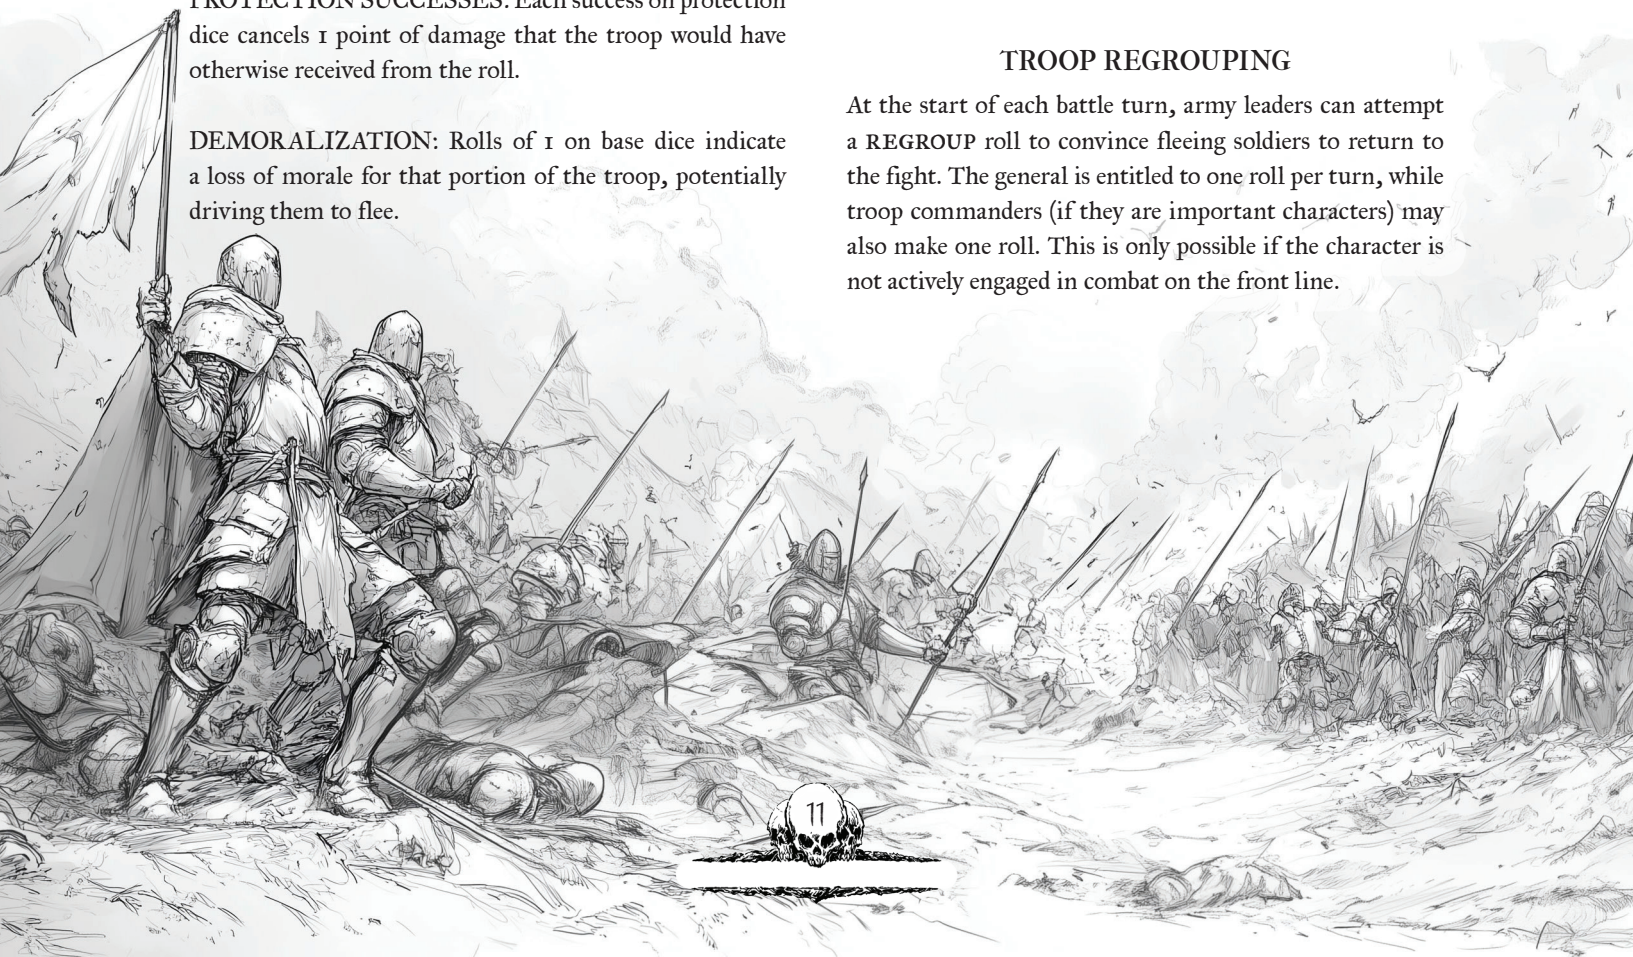

Through both the general's speech and their protections, each troop has Morale Points during the battle. These points serve a single purpose: to nullify results of 1 that cause demoralization. When a troop runs out of Morale, demoralization results will cause one die (representing a corresponding number of units) to flee the battlefield and seek refuge in the rear.

Each point of damage a troop takes that cannot be blocked (i.e., each die lost due to casualties) reduces its Morale Points by 1.

DEATH TO COWARDS: The general can issue an order to execute any soldiers who flee from the enemy. This is a drastic and cruel decision that will reduce the army's numbers but also give remaining warriors a reason to keep fighting (no escape, it's victory or death). Each fleeing die (or group of soldiers) can be eliminated by a troop stationed in the rear: one die for each fleeing die per turn. For each die executed, the Morale Points of all other troops in the army increase by 1. After the battle, the general and commanders who carried out this order must deal with the discontent of their soldiers if the decision was unjustified.

TROOP REGROUPING

At the start of each battle turn, army leaders can attempt a **REGROUP** roll to convince fleeing soldiers to return to the fight. The general is entitled to one roll per turn, while troop commanders (if they are important characters) may also make one roll. This is only possible if the character is not actively engaged in combat on the front line.

The roll is with **PERFORMANCE** or **MANIPULATION**. Each success convinces one base die to regroup and prepare to fight again when ordered, positioning itself in the rear. However, each result of 1 causes one die to permanently leave the battle. In both cases, the character decides which result applies to each group.

These 1s also apply to skill dice, so while you can push these rolls, any 1s rolled on dice cannot be re-rolled. Otherwise, apply the normal rules for pushing rolls.

Demoralized units that are not regrouped by the end of the second turn after fleeing leave the battlefield permanently.

IMPORTANT CHARACTER DIE

Important characters grant 1 advantage die to the troop they are in. For the sake of the story, you may need to determine what happens to them during each turn of the battle. To do this, you can use a die of a different color to represent the character alone. This die is still treated as an advantage die, but it can also have special effects. These rules are optional.

ARTIFACT DIE: If the character possesses a powerful artifact, their D6 can be replaced with the corresponding artifact die.

DAMAGE TO THE CHARACTER: If the result of this die is 1, the character suffers battle injuries during that turn. Roll as many dice as their current Strength; each 1 and 2 causes damage. This may result in the character becoming Broken, following the normal rules for this condition.

BROKEN: If the character is rendered Broken due to loss of points, they cannot continue fighting. In such cases, their die is still rolled each turn, but its success no longer benefits the troop. Instead, it represents their ability to escape on their own. A result of 1 in this situation means the character is finished off by an enemy and dies in battle.

RETREAT: A group from their troop (one base die) may carry the Broken character to safety, moving them to the rear. This decision can be made by the character, the troop's commander, or the general. Any opposing decision

INTERPRET THE RESULTS

Battles are rare events in a campaign and should serve as dramatic turning points. Take your time to make a battle a memorable event.

Translate the abstraction of dice results into concrete moments. Why would a troop with an advantage end up fleeing due to rolling 1s? Perhaps the fervor of the disadvantaged soldiers struck fear into them, or every step became unbearably exhausting. Maybe their commander performed an act of terrifying heroism. All these details help build a unique and unforgettable experience.

cancels this possibility. However, strong devotion from the soldiers might override such opposition, with appropriate narrative consequences afterward.

FLEEING: Important characters do not flee the battlefield unless the last base die of their troop flees. In such cases, they retreat alongside the last group to the rear and can then attempt to regroup their subordinates.

CAPTURE: If an important character is in a troop whose last base die is eliminated by damage, the character is automatically rendered Broken and suffers a critical injury. They may be captured or killed, depending on the enemy's intent. Keep in mind that hostages are important tools for negotiation in wars.

COMMANDERS MOVEMENT

Important characters have the ability to switch troops depending on the battle's situation. At the start of each turn, they can move to a different troop, granting that troop their associated advantage die. Battlefields can theoretically be traversed in one turn, allowing a commander to move to any allied troop in any section or rank.

This also applies to regrouping demoralized units. A character can leave their troop at the start of a turn to move to the rear and make a REGROUP roll. However, only one movement is allowed per turn, so they cannot return to the fight after attempting to regroup.

RANGE

When troops with the Range effect are present, additional turns are played in the battle during which only these troops attack. Their enemies may roll their protection dice to avoid damage and use their advantage dice solely to cancel the successes of the skirmishers' advantage die.

The logic behind this is that while units are advancing to engage their enemies on the battlefield, skirmishers can leverage their ranged weapons to inflict casualties.

The Range effect only applies to troops actively moving into combat, whether they are advancing from the first rank or moving up from another rank to engage.

We aim to keep the battlefield abstract to simplify the portrayal of these scenes. However, you can divide the map into zones and create a more realistic simulation of events if you prefer.

SKIRMISHERS RULES

Skirmisher troops are highly effective at weakening the enemy from a distance. When firing projectiles and not engaged in melee combat, results of 1 on their base dice do not reduce their morale, as they are not in immediate danger. However, if they are being attacked by other skirmishers, they can lose morale during the battle roll.

Skirmisher projectiles are fired in volleys, lacking great precision. This means they can attack enemies already engaged in melee with allied troops, but there is a risk of harming their own allies. Results of 1 on their base and advantage dice deal damage to allied troops instead of the

enemy, following the normal procedure. In most cases, it is better for skirmishers not to fire once both armies are engaged in melee combat.

There is an exception to this rule. If, due to the narrative or battlefield movements, the skirmisher troop positions itself on the flank or rear of the enemy troop, it can fire its projectiles without the risk of harming allies.

SKIRMISHING CAVALRY

Cavalry troops equipped with ranged weapons have a significant advantage on the battlefield, as they can harass enemies and retreat to a safe distance with ease thanks to the mobility of their mounts.

This is represented by what we call the MOBILITY ADVANTAGE. Skirmishers with this advantage do not suffer the effects of Attacks Second or Demoralized from their ranged weapons as long as their enemy does not surpass them in successes during a BATTLE ROLL. If, in any turn, the opposing troop surpasses the skirmishing cavalry in successes, they lose their mobility advantage and must apply the negative effects of their weapons. To determine the loss of this advantage, only successes from base dice and advantage dice are considered, regardless of the damage inflicted after reductions from protection.

It is possible to regain the mobility advantage. If, in a subsequent turn, the troop surpasses its enemy in successes, it means they have executed a maneuver to maintain distance once more. In the following turn, they will once again benefit from their mobility advantage until they lose it, as explained above.

SIEGES

Sieges involve an army attempting to assault a fortified position, while the defenders use every means at their disposal to resist.

The rules for sieges slightly modify the general battle rules previously explained. Below, we address the specific considerations for this type of conflict.

UNITS PER TROOP

Warriors within a fortress are defending a position, allowing them to maximize their numbers to repel the enemy. To gain one **BASE DIE**, infantry and skirmisher troops need 10 units instead of 20. The maximum base dice remain 5, but this adjustment allows for the formation of twice as many troops of these types.

ORDER OF BATTLE

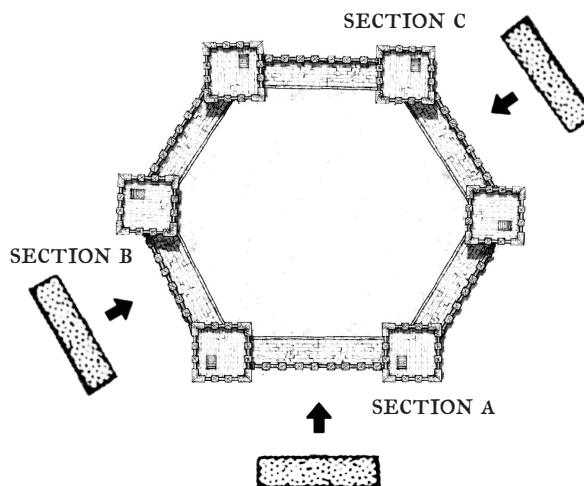

In sieges, the battlefield consists of the walls, the fortress courtyard, and the surrounding terrain where the attackers lay siege. Because of this, the order of battle changes entirely.

Sections are no longer divided into three but are instead organized as needed for the defense and assault of the fortress, depending on the attackers' disposition as they approach the walls.

For sieges, the attacking army always places its troops first, without exception (generals do not roll to determine the order). Once this is done, the defenders position their troops to repel the assault. There will be as many sections as the attackers establish, based on what makes sense for the besieged location. The Gamemaster has the final word in this matter.

This grants an advantage to the attackers, as they can open multiple fronts if they outnumber the defenders. However, the defenders gain the benefit of seeing the enemy's disposition and can form smaller, equally or more effective troops for battle.

Sections remain in place even if the attackers breach the walls and the battle moves inside. Sections may also change if the narrative progression of the battle warrants it. Again, the Gamemaster must remain flexible to handle these situations.

WALLS

Walls grant defenders the ability to **ATTACK FIRST**, as well as advantage dice based on their size. However, attackers can attempt to scale the walls to reach the top and fight on equal footing.

If, in any battle turn, an infantry troop achieves more successes than the defenders, it means they have secured their position on the walls. The walls no longer provide their advantage, at least against that troop. The bonus cannot be regained, as the fight is now taking place on the walls themselves. However, units can no longer retreat, meaning demoralization results in automatic deaths.

If a fortification has more than one wall, the bonus is considered separately for each one. Wall modifiers do not stack.

We will address the specific effects of walls in the chapter on Strongholds.

SIEGE ENGINES

Siege engines are essential tools for any army attempting to assault a stronghold. Each one provides various effects that greatly benefit the attackers, either compensating for the advantages of walls or rendering them ineffective.

Each engine must be operated by a troop within the army, which is responsible for moving, operating, and protecting it. Engines that attack from a distance are typically assigned to cavalry or skirmisher troops, while those meant to directly engage the walls are assigned to infantry.

SIEGE ENGINES

Siege engines have various effects depending on their characteristics and construction costs.

PROTECTION	EFFECTS	TIME
Battering Ram	3 siege dice. Breaks the gate. If successful, cavalry can enter.	7 days
Siege Tower	6 siege dice.	30 days
Catapult	4 attack dice.	14 days
Trebuchet	8 attack dice.	60 days
Tunnel	Can create a path, demolish a section of the walls, a gate, or a tower.	???

Each engine must be constructed on-site, requiring a number of days as indicated in the TIME column.

BATTERING RAMS AND TOWERS: These machines only provide their benefits until the walls are breached; afterward, they have no further effect. Specifically, they grant SIEGE DICE (which should be a different color). Each success serves only to breach the wall and does not deal damage. However, defenders' successes can damage the machine: results of 1 on siege dice absorb 1 point of damage caused by the defenders, reducing the machine's dice. If the siege dice are reduced to zero, the machine is destroyed.

CATAPULTS AND TREBUCHETS: Each provides a number of attack dice that can be rolled once per day. Successes on these dice inflict one point of damage to the walls, reducing their advantage dice in a specific section. These weapons can cause such significant damage that defenders are often forced to conduct sorties outside the stronghold to destroy them.

TUNNEL: Tunnels are a special case, as they are both difficult to dig and inherently unstable. Their objective may be to breach the walls, collapse a tower, or provide direct access to the interior of the stronghold (this is determined by the army's general). Roll 2D6 before starting the tunnel to determine the terrain characteristics: the sum of the results is the number of successes required to achieve the objective. Take the higher die result as the base stability of the tunnel. Each day, a troop works on digging, rolling

their BASE DICE: each success represents progress, while each 1 reduces the tunnel's stability. If stability reaches zero, the structure collapses, and the troop is eliminated. It is possible to abandon the tunnel and begin a new one.

ENGINEERS

Every siege engine constructed and operated requires an engineer. Construction can only continue while an engineer is assigned to the project. This is particularly critical for tunnels, which need constant supervision.

For catapults and trebuchets to function effectively, an engineer must be calibrating the weight of the stones and the range. Without this oversight, their attack dice are reduced to 1/4. Battering rams and siege towers, on the other hand, can be used without engineers once construction is complete.

Engineers are special characters who charge a small fortune (5 silver coins per day) but are indispensable for any besieging army. Only a character with the Engineer talent can perform this role. This talent is explained in the following chapter.

CAVALRY AND SKIRMISHERS

When assaulting a wall, horses and arrows are of little use. Troops of these types simply cannot fight as attackers until the gates are opened and the battle moves inside. These troops are often assigned to operate catapults and trebuchets.

BLOCKADE

The safest but slowest way to conquer a stronghold is to starve its defenders into surrender. To establish an effective blockade that prevents resupply, the attacking army must outnumber the defending army by three to one. If the stronghold has access to the sea, it must also be blockaded by ships, or the siege will be ineffective.

Once the blockade begins, the stronghold relies entirely on its reserves for survival. However, the besieging army must also sustain its soldiers during the slow passage of weeks or months, making this strategy more challenging than simply waiting.

SUPPLIES

One of the primary concerns an army must address to succeed in a military campaign is how to feed its members. Running out of supplies is a direct path to the absolute destruction of a military force without the enemy needing to draw a single sword. This applies not only to defenders holding a stronghold against an enemy attempting to starve them into surrender but also to attackers who must keep their troops well-fed to maintain their effectiveness in battle and prevent desertion or death.

Given the critical importance of food and access to it during war, the following rules adapt this fundamental aspect.

SUPPLY UNITS

Each army has a number of **SUPPLY UNITS**. These are obtained from their bases of operations or by foraging and looting the surrounding area.

Each infantry and skirmisher unit in the army consumes 1 supply unit per day, cavalry units consume 2, and monsters consume 20.

To understand the production and storage of these supplies, we will provide specific rules in the chapter on Strongholds.

Once per day (during any quarter of the day), the troops must be fed. For every unit in your army, reduce your supply units by 1.

STARVING TROOPS

When your supply units are insufficient to feed your entire army, you must decide which units to feed and which to leave hungry.

This is done by selecting troops, deciding that none of the units in those troops will receive food for that day, thereby saving the corresponding supply units.

Each troop with unfed units suffers demoralization with results of 1 and 2 causing this effect. Additionally, all enemy troops fighting against them gain 2 advantage dice that are not limited by base dice.

These drastic measures can be taken not only when you are already out of supplies but also when you anticipate running out within a certain number of days unless consumption is reduced. It is up to you to decide when and how to leave your troops without food.

DESERTION AND DEATH

A troop that has not been fed for a day must make a roll for **DESERTION** and **DEATH**. Roll the troop's **BASE DICE**: On one hand, each result of 1 causes desertion, removing that die from the troop. On the other hand, add the number of days the troop has gone unfed to the same result: each result of 10 or higher means the death of the units it represents. These rolls are independent, so the days of hunger do not make it impossible to roll results of 1.

CONSUMPTION OF SUPPLIES	
TYPE	CONSUMPTION
Infantry	1
Skirmishers	1
Chivalry	2
Monster	20

BUYING SUPPLIES

Acquiring a supply unit (such as in a village before starting a military campaign) costs 2 copper coins, equivalent to a simple yet high-calorie meal. The specific situation of a village or region, depending on supply and demand, might alter this price.

FORAGING FOR SUPPLIES

An army's soldiers can be sent to forage and hunt for food. This is a much more common and necessary task than it might initially seem. The environment is crucial for an army to avoid rapidly depleting its reserves.

When a general orders a forage for supplies, the involved troops roll their **BASE DICE** (skirmisher dice are doubled): the results on the dice are multiplied by 10. The total sum of these results is the number of supply units the army obtains in a quarter day.

The natural resources of a hex are gradually depleted by this predatory method of gathering food. For each quarter day an army forages in a specific hex, the result of each base die rolled is reduced by 1. This penalty recovers at a rate of 1 per week.

If a troop is sent to forage in another hex, the army must divide, leaving troops unable to assist each other if battles are initiated to exploit this division. The rules regarding this will be explained later in the section on army movement.

SUPPLY LINE

Armies are connected to a base, which can be a stronghold, a fort, a village, or even a dungeon, any location capable of gathering and providing resources for the army.

Part of the logistics of leading an army involves securing a supply line to transport provisions from this base to the troops in the field. As long as this connection is maintained, these troops can receive supply units and reinforcements to bolster their ranks or replenish troops that have suffered casualties.

The base's capacity to provide supplies and reinforcements depends on the specific case, which will be addressed in a later chapter. For now, note that the supply line follows the shortest possible path between the hexagon where the base is located and the army's current position.

CUTTING SUPPLY LINES

The most effective way to wear down an army without engaging it in direct combat is to sever its connection to its base, preventing it from receiving supplies. This strategy can be especially frustrating for large invading armies, which will soon have to resort to ravaging the surrounding environment to feed themselves.

How to achieve this depends on the circumstances. Generally, it is sufficient for the enemy to pass through one of the direct hexagons between the army and its base. A small skirmish occurs, and the supplies are stolen. If reinforcements are also being sent, a larger battle might occur. Since supplies are typically delivered once a week, cutting the line denies the army food for that duration.

This tactic is often carried out by cavalry troops, as their speed reduces the likelihood of being intercepted by the enemy army.

CAMPAIGN

Armies moving across the map of the Forbidden Lands are composed of a multitude of diverse units and, above all, are tumultuous and very slow. The quarter day rules from the Player's Handbook apply identically to those previously explained, but there are some additional considerations to keep in mind.

MARCH: The normal march of an army corresponds to its slowest troops. Infantry can move 1 hexagon per quarter day, while cavalry can move 2 hexagons per quarter day.

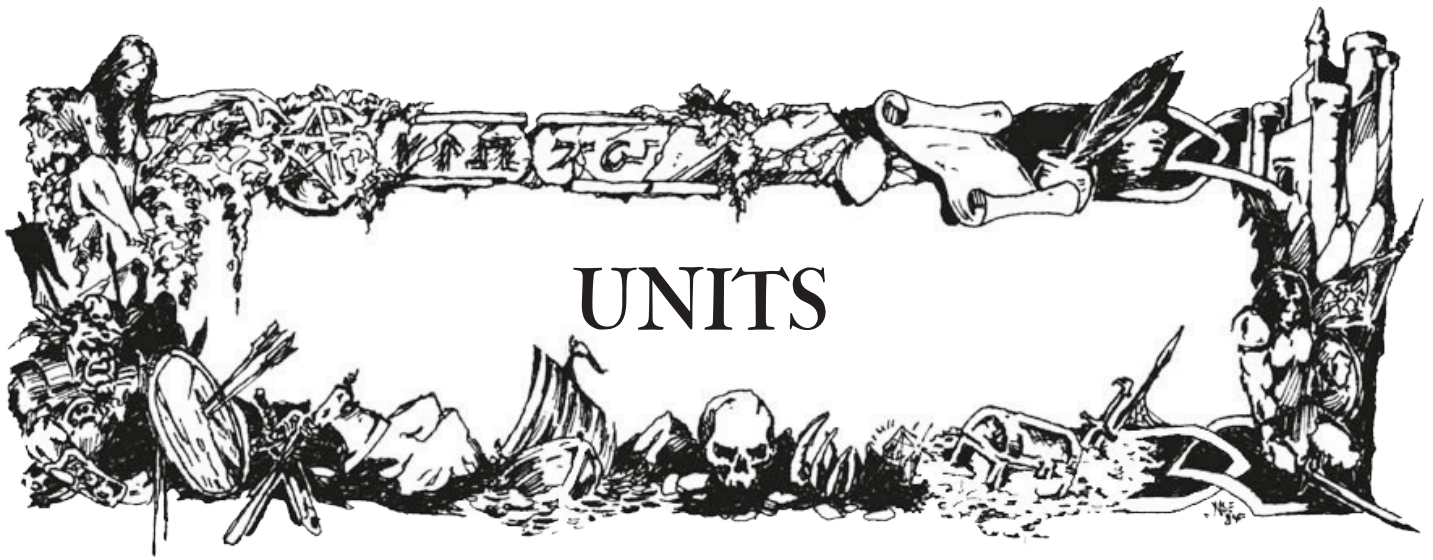

FORCED MARCH: Armies can march for a second quarter day, but this is considered a forced march. If the army enters battle on the same day or the next, its base dice will suffer increased demoralization, with results of 1 triggering the effect with an additional +1. Given all that an army must accomplish during a marching day, forced marches are generally not advisable.

COOKING: Armies usually carry raw or dried food, particularly grain, as it is easier to transport. Food obtained from the same hex is raw and may spoil, so it must be cooked as soon as possible. Regardless, dedicating a quarter day to cooking and eating is fundamental to an army's routine.

CAMPING: An army on the move must break camp in the morning and set it up again at the location where it plans to spend the night. This process takes an entire quarter day. An army that does not set up a proper camp is far more vulnerable to surprise attacks, especially at night.

SLEEPING: Troops need to sleep, typically for one quarter day, most likely at night. If poorly rested, a troop will suffer increased demoralization, with results of 1 triggering the effect with an additional +1 due to exhaustion.

ACCUMULATED DEMORALIZATION: Note that due to poor nutrition, forced marches, and lack of sleep, a troop can accumulate demoralization effects to the point where results of 1 through 4 on its base dice trigger this effect.

A spearman tightens his grip on his weapon, recalling the broken promises in his village. The archer exhales, feeling every fiber of her bow as it strains, unsure if her arrow will bring salvation or doom. A scarred veteran whispers a cherished name before charging. In their gestures and glances lives the essence of a battle far greater than themselves.

Troops are composed of units. The basics that define their characteristics in battles were explained in the previous chapter, but now we will address additional rules related to the individuals themselves, such as their possible talents. We will also include examples of units and all the details regarding the troops they form.

NEW TALENTS

Characters, as individuals, can acquire some specific talents related to war and battles.

COMMANDER

You possess the gift of leadership, able to give effective orders even in chaotic environments like a battlefield.

- ❖ RANK 1: Those under your command feel the confidence of being led by a competent leader. The troop gains Morale Points equal to your level in this talent. You can grant this benefit to only one troop per battle.
- ❖ RANK 2: You enforce your word. You gain a +2 modifier to your REGROUP rolls and in any other battle-related situation where the Gamemaster deems it appropriate.
- ❖ RANK 3: You are a crucial element in the outcome

of a battle. Your presence in a troop grants it 1 advantage die. This benefit is independent of the die granted for being an important character (many great commanders might not be important characters).

GENERAL

You are a leader of masses, well-versed in battle strategies and the art of war, making you a recognized and competent general for an army.

- ❖ RANK 1: You know how to rally the soldiers who follow you into battle. You gain a modifier to your PERFORMANCE roll for rallying your troops equal to your level in this talent.
- ❖ RANK 2: Your presence on the battlefield can influence the outcome of the conflict. The troop you join gains an additional D8 (this is not an advantage die). This benefit is independent of the advantage die granted for being an important character or from the Commander talent.
- ❖ RANK 3: You inspire confidence in your troops, fostering intense loyalty that leads them to blindly trust your decisions. In addition to the narrative effects, each time you move to a troop, you can make a PERFORMANCE roll. For every 2 successes you achieve, the troop gains 1 Morale Point.

ENGINEER

You have acquired valuable knowledge about the physical forces that govern the world and how to construct machines to harness them for your cause.

- ❖ **RANK 1:** You can oversee the construction of a siege engine. For catapults and trebuchets, their effectiveness is only complete if you are present when the projectiles are launched. You must be assigned to a siege engine to perform these functions and can only be assigned to one at a time.
- ❖ **RANK 2:** You reduce the construction time of the siege engine you are assigned to by 20% (rounding up).
- ❖ **RANK 3:** Siege engines built under your supervision gain +1 to their attack or siege dice, depending on the type of engine.

CHIEF OF RIDERS

You are an expert rider, commanding respect among those who excel at mounted combat and capable of organizing them amidst the chaos of battle.

- ❖ **RANK 1:** You can spend 1 Morale Point from your cavalry troop to charge the enemy, gaining a D8 during the first turn of combat with the enemy troop. The lost Morale Point reflects the strain of the charge. If the enemy manages to create distance (as skirmishing cavalry do), you can charge the same troop again as long as you have Morale to spend.
- ❖ **RANK 2:** You combine the advantage dice gained by your troop due to having a larger size or attacking the enemy's flanks or rear into an artifact die (which no longer counts toward the limit imposed by base dice). This die starts as a D8 with two advantage dice and can increase up to a D12.
- ❖ **RANK 3:** The die for charging increases to a D10. Additionally, even if your troop is engaged in combat, you can order a retreat by succeeding in a **PERFORMANCE** roll. Your troop will remain cohesive, move to a safe distance, and can either charge the enemy again or be repositioned as needed for the battle's situation.

EXAMPLE UNITS

To conclude this chapter, we present a few sample units to help you compose the troops for the battles you will conduct in the Forbidden Lands.

HUMAN PEASANT

Human peasants tend to their small plots of land and have almost no military training. Even so, they are summoned by their local leaders to defend a common cause, serving in numbers with the simple weapons they can access.

TYPE: Infantry

WEAPONS: Long weapon (attack first, attack +2 vs cavalry, two-handed).

PROTECTION: None.

PAYMENT: 10 coppers per day.

MOUNTS AND SIZE

As you may know, horses are not the only mounts in the Forbidden Lands. This makes the size advantage less straightforward in many circumstances.

Should a troop of goblins mounted on wolves gain an advantage die?

Remember, the size advantage die is earned by being larger, not by being cavalry or mounted. Goblins on their mounts could deny a size advantage die to humans on foot by being larger than them and gain an advantage die against goblins or halflings on foot.

HUMAN HUNTER

When forming skirmisher troops on foot, recruiters look for hunters from each community, as they are the only ones with experience using bows. They are well-suited for shooting arrows from a distance but have limited equipment and little ability to withstand melee combat.

TYPE: Skirmishers.

WEAPONS: Light ranged weapon (range 1, two-handed, strikes second, demoralized in melee). Short weapon (attacks second, attack +2 vs long weapons).

PROTECTION: None.

PAYMENT: 10 coppers per day.

HUMAN SKIRMISHER

Some archers are highly trained in castles to use longbows and harass their enemies, aiming to gain a tactical advantage in battle.

TYPE: Skirmishers.

WEAPONS: Longbow (range 2, two-handed, attacks second, demoralized in melee). Short weapon (attacks second, attack +2 vs long weapons).

PROTECTION: Leather Armor (protection 2, Morale +1).

ADVANTAGES: Well-Trained Units (+1).

PAYMENT: 20 coppers per day.

CROSSBOWMAN

In some castles, crossbows are crafted to arm soldiers with a ranged weapon much easier to use than a bow, allowing the ranks of skirmishers to be bolstered.

TYPE: Skirmishers.

WEAPONS: Crossbow (range 1, attack +1, two-handed, attacks second, demoralized in melee). Short weapon (attacks second, attack +2 vs long weapons).

PROTECTION: Leather Armor (protection 2, Morale +1).

PAYMENT: 20 coppers per day.

ASLENE RIDER

Nearly all Aslenes grow up on horseback, making them expert riders whose combat effectiveness is fearsome in the Forbidden Lands, where cavalry is scarce. Aslene riders form light, highly mobile troops.

TYPE: Cavalry.

WEAPONS: One-handed weapon.

PROTECTION: Small Shield (protection 1, protection 2 vs projectiles).

ADVANTAGES: Well-Trained Units (+1).

PAYMENT: 25 coppers per day.

ASLENE RIDER WITH BOW

Some Aslene riders are trained to shoot their curved bows from horseback, even while galloping. This makes them one of the most valuable and distinctive units in the Forbidden Lands.

TYPE: Skirmishing Cavalry.

WEAPONS: Light ranged weapon (range 1, two-handed, strikes second, demoralized in melee). One-handed weapon.

PROTECTION: Small Shield (protection 1, protection 2 vs projectiles).

ADVANTAGES: Well-Trained Units (+1).

PAYMENT: 30 coppers per day.

HUMAN SOLDIER

Humans trained in castles to fight in the name of their lord are few but highly valued. Their loyalty lies with the leaders who shelter them on their lands and feed them in exchange for their oath to serve in battle.

TYPE: Infantry

WEAPONS: One-handed weapon.

PROTECTION: Small Shield (protection 1, protection 2 vs projectiles). Chainmail (protection 4, protection 2 vs projectiles and polearms, protection 1 against blunt and thrown weapons, Morale +2).

ADVANTAGES: Well-Trained Units (+1).

PAYMENT: 15 coppers per day.

KNIGHT

Knights are among the best-prepared soldiers in the Forbidden Lands. This is because they are nobles, able to dedicate their lives to training for honor in battle, as well as equipping themselves with superior gear for protection. It is not uncommon for these soldiers to dismount if the circumstances of the battle require it or if they see an opportunity to gain greater prestige in combat.

TYPE: Cavalry.

WEAPONS: Long weapon (attack first, attack +2 vs cavalry, two-handed). One-handed weapon.

PROTECTION: Large Shield (protection 2, protection 3 vs thrown weapons, protection 4 vs projectiles, Morale +1). Plate Armor (protection 6, Morale +4, Slow 1).

ADVANTAGES: Well-Trained Units (+1).

PAYMENT: 60 coppers per day.

RUST BROTHER

It is impossible to mention human units without giving a special section to the Rust Brothers. Fanatical and always ready to fight, they are undoubtedly the best-prepared warriors in the Forbidden Lands.

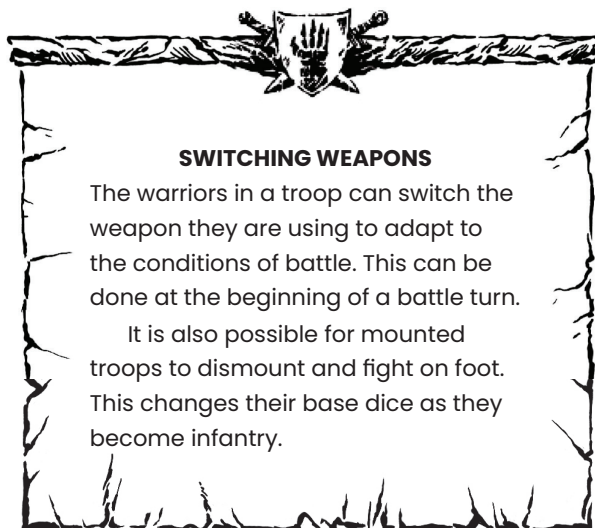

TYPE: Infantry

WEAPONS: One-handed weapon.

PROTECTION: Large Shield (protection 2, protection 3 vs thrown weapons, protection 4 vs projectiles, Morale +1). Plate Armor (protection 6, Morale +4, Slow 1).

ADVANTAGES: Well-Trained Units (+1), religious fervor vs Orcs, Elves, and Dwarves (+1).

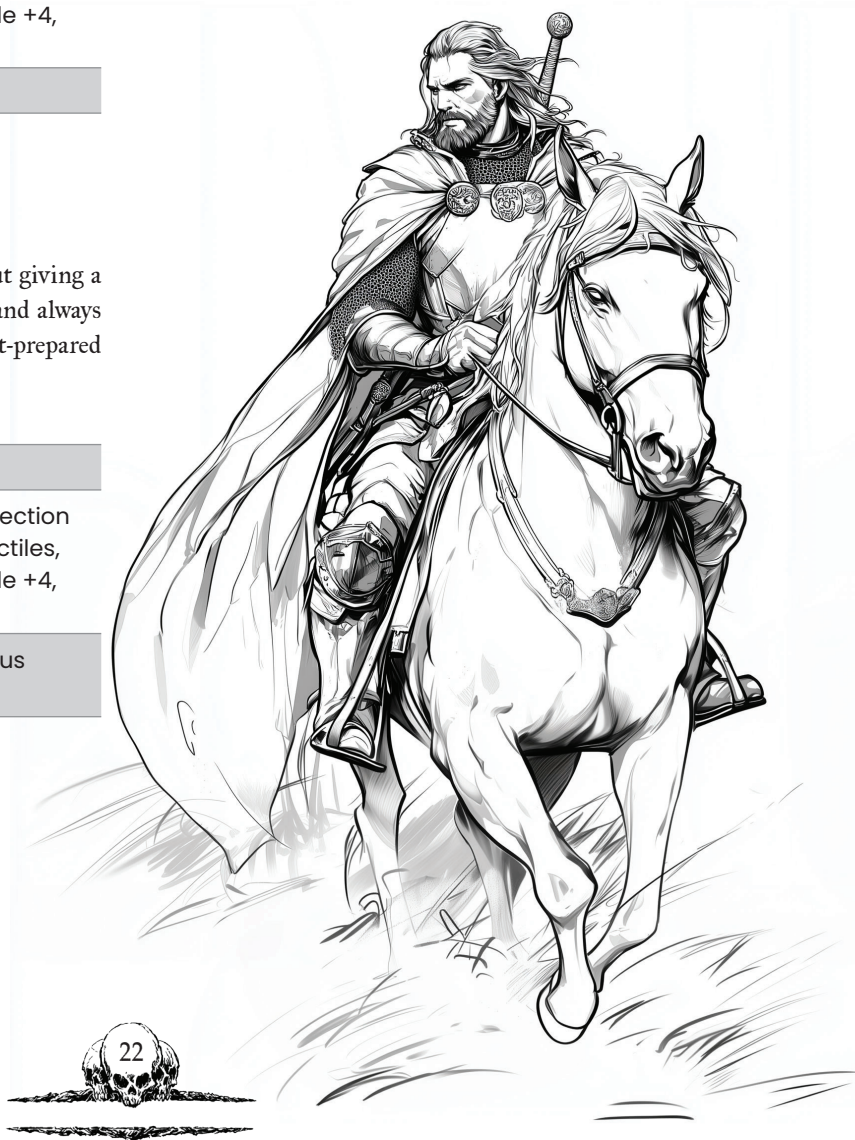

PAYMENT: 35 coppers per day.

SWITCHING WEAPONS

The warriors in a troop can switch the weapon they are using to adapt to the conditions of battle. This can be done at the beginning of a battle turn.

It is also possible for mounted troops to dismount and fight on foot. This changes their base dice as they become infantry.

IRON GUARD

The elite forces of the Rust Church, highly trained units capable of striking terror into any army in Ravenland.

TYPE: Infantry

WEAPONS: Two-Handed Weapon (attack +1 vs infantry and skirmishers).

PROTECTION: Plate Armor (protection 6, Morale +4, Slow 1).

ADVANTAGES: Well-Trained Units (+1), religious fervor vs Orcs, Elves, and Dwarves (+1), misgrown infantry (+2).

PAYMENT: 40 coppers per day.

IRON CAVALRY

When a member of the Iron Guard is trained in mounted combat, an elite unit of immense value is born, capable of overpowering most armies with the sheer strength of their mounts and the inhuman power of their warriors.

TYPE: Cavalry.

WEAPONS: One-handed weapon.

PROTECTION: Large Shield (protection 2, protection 3 vs thrown weapons, protection 4 vs projectiles, Morale +1). Plate Armor (protection 6, Morale +4, Slow 1).

ADVANTAGES: Well-Trained Units (+1), religious fervor vs Orcs, Elves, and Dwarves (+1), misgrown infantry when dismounted (+2).

PAYMENT: 55 coppers per day.

GRIFFON RIDER

Some extremely skilled riders can tame the temperamental griffons to obey their commands and fight for the Church. These riders and their mounts are truly fearsome, capable of turning the tide of a battle on their own.

TIPO: Monstruo.

WEAPONS: Natural Weapon (attacks second, attack +2 vs polearms). Long weapon (attack first, attack +2 vs cavalry, two-handed).

PROTECTION: Plate Armor (protection 6, Morale +4, Slow 1).

PAYMENT: 130 coppers per day.

DWARVEN LABORER

Dwarves are strong, and most are skilled fighters, but not all are warriors. Many are laborers who build their strength in the mines or other demanding work. Even so, they always keep their axe ready for the moment of truth.

TYPE: Infantry

WEAPONS: One-handed weapon.

PROTECTION: Small Shield (protection 1, protection 2 vs projectiles). Leather Armor (protection 2, Morale +1).

ADVANTAGES: Dwarven Infantry (+1).

PAYMENT: 10 coppers per day.

DWARVEN WARRIOR

Many dwarves contribute to their community by performing various tasks, such as mining, hunting, or even trading, but at the same time, they live in preparation for war. They yearn for it, awaiting the moment their race will rise and reclaim its place in the Forbidden Lands.

TYPE: Infantry

WEAPONS: One-handed weapon. Thrown Weapon x1 (one free attack before engaging in combat, attack +1 vs cavalry).

PROTECTION: Large Shield (protection 2, protection 3 vs thrown weapons, protection 4 vs projectiles, Morale +1). Chainmail (protection 4, protection 2 vs projectiles and polearms, protection 1 against blunt and thrown weapons, Morale +2).

ADVANTAGES: Well-Trained Units (+1), Dwarven Infantry (+1).

PAYMENT: 25 coppers per day.

ELITE DWARVEN WARRIOR

Each dwarven clan has a core of warriors who serve as guardians of their strongholds or mines and are always ready to face any threat, as well as escort those traveling between communities. They are either nobles or the fiercest and most skilled fighters, many of whom earn their prestige by slaying fearsome monsters.

TYPE: Infantry

WEAPONS: Two-Handed Weapon (attack +1 vs infantry and skirmishers).

PROTECTION: Plate Armor (protection 6, Morale +4, Slow 1).

ADVANTAGES: Well-Trained Units (+1), Dwarven Infantry (+1).

PAYMENT: 35 coppers per day.

DWARVEN CROSSBOWMAN

Dwarves often disdain ranged combat, but those who do not excel in melee can still contribute with a crossbow in hand.

TYPE: Skirmishers.

WEAPONS: Crossbow (range 1, attack +1, two-handed, attacks second, demoralized in melee). One-handed weapon.

PROTECTION: Chainmail (protection 4, protection 2 vs projectiles and polearms, protection 1 against blunt and thrown weapons, Morale +2).

ADVANTAGES: Infantería de enanos si cambian al arma cuerpo a cuerpo (+1).

PAYMENT: 25 coppers per day.

ARMORED WAR DOGS

The dwarves of the Canide Clan use dogs trained to fight fiercely in battle.

TYPE: Infantry

WEAPONS: Natural Weapon (attacks second, attack +2 vs polearms).

PROTECTION: Leather Armor (protection 2, Morale +1).

PAYMENT: 0 coppers per day (only consumes supplies).

ELF RANGER

Elves are rare, and not all of them dedicate themselves to combat, but those who do are exceptional archers.

TYPE: Skirmishers.

WEAPONS: Light ranged weapon (range 1, two-handed, strikes second, demoralized in melee). One-handed weapon.

PROTECTION: Leather Armor (protection 2, Morale +1).

ADVANTAGES: Well-Trained Units (+1), Elven Skirmishers (+2).

PAYMENT: 15 coppers per day.

REDRUNNER

These elves are on a crusade to recover their race's rubies and protect Ravenland from threats that risk plunging it into despair. They are extraordinary warriors.

TYPE: Infantry

WEAPONS: Two-Handed Weapon (attack +1 vs infantry and skirmishers). Thrown Weapon x2 (one free attack before engaging in combat, attack +1 vs cavalry).

PROTECTION: Chainmail (protection 4, protection 2 vs projectiles and polearms, protection 1 against blunt and thrown weapons, Morale +2).

ADVANTAGES: Well-Trained Units (+1).

PAYMENT: 35 coppers per day.

SLAVE ORC

Though degraded, weaker, and less skilled than free orcs, slave orcs remain useful combatants in battles, often relegated to the expendable front lines. If their lives are worth anything, let them prove it with blood.

TYPE: Infantry

WEAPONS: One-handed weapon.

PROTECTION: None.

ADVANTAGES: Orc Infantry (+1).

PAYMENT: 0 coppers per day (only consumes supplies).

ORC WARRIOR

Free orc males spend all their spare time preparing for combat. It is their way of proving their worth as males of the tribe.

TYPE: Infantry

WEAPONS: One-handed weapon.

PROTECTION: Leather Armor (protection 2, Morale +1).

ADVANTAGES: Well-Trained Units (+1), Orc Infantry (+1), Racial fervor vs Elves, Dwarves, and Rust Brothers (+1).

PAYMENT: 10 coppers per day.

HARDENED ORC

Some orcs are untamed warriors who live with the battle ahead always in mind. They train to exhaustion daily and are the elite of their race, the most trusted members of the tribe by their leader.

TYPE: Infantry

WEAPONS: Two-Handed Weapon (attack +1 vs infantry and skirmishers). Thrown Weapon x2 (one free attack before engaging in combat, attack +1 vs cavalry).

PROTECTION: Leather Armor (protection 2, Morale +1).

ADVANTAGES: Well-Trained Units (+1), Orc Infantry (+1), Racial fervor vs Elves, Dwarves, and Rust Brothers (+1).

PAYMENT: 30 coppers per day.

GOBLIN

The small warriors of the goblin race are surprising in their ferocity on the battlefield, though they often cower when things start to turn dire.

TYPE: Infantry

WEAPONS: One-handed weapon.

PROTECTION: Small Shield (protection 1, protection 2 vs projectiles).

PAYMENT: 10 coppers per day.

WOLF RIDER

Goblins mounted on their loyal wolf companions are versatile warriors with great mobility. Additionally, they manage to avoid the height disadvantage they face against other races.

TYPE: Skirmishing Cavalry.

WEAPONS: Light ranged weapon (range 1, two-handed, strikes second, demoralized in melee). One-handed weapon.

PROTECTION: Small Shield (protection 1, protection 2 vs projectiles).

PAYMENT: 30 coppers per day.

STRONGHOLDS

An archer crouches behind a splintered battlement, watching the enemies scaling the wall. Below, a soldier with a soot-streaked face braces a beam to reinforce the groaning gate. A voiceless herald hangs tattered banners, reminding the defenders why they fight. Further away, in a dim chamber, a wounded captain traces plans on an uneven table, his eyes weary but resolute.

Strongholds are the perfect base of operations for any army. They are typically where troops are recruited, trained, and where resources are gathered to sustain them. They are also the locations that must be defended to maintain control over a region, and many serve as both the starting point and the conclusion of a military campaign.

In this chapter, we will approach strongholds from the perspective of what they offer for warfare, simplifying all original rules to focus on functions that are specific to conflicts and armies.

warfare and the rules in this supplement (it may have other effects, such as those described in the Player's Handbook, but they are not relevant here).

The production of each function (copper coins generated) is weekly and includes worker wages. On the other hand, general effects function continuously.

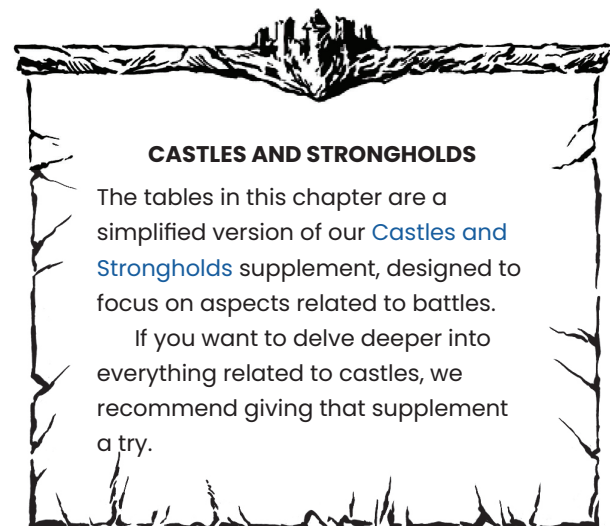

There are several clarifications to be made regarding the operation of a stronghold and considerations to keep in mind when managing its benefits.

FUNCTIONS

As you know, strongholds feature structures, rooms, or specific areas referred to as **FUNCTIONS**. Each one provides a concrete effect that benefits those who inhabit and work within the stronghold.

In this book, we focus solely on functions that provide defensive advantages or produce what is needed to sustain military campaigns. For a quick overview, refer to the **STRONGHOLD FUNCTIONS AND EFFECTS** table on the next page.

For each function, we indicate a **COST** in copper coins (including material purchases and worker salaries) as well as the **TIME** in days required for construction. The next column describes the effect it provides, always related to

STRONGHOLD FUNCTIONS AND EFFECTS

This list includes only the functions that have effects related to warfare.

FUNCTION	COST	TIME	EFFECT
Guard Tower	2100	16 days	Provides 1 advantage die to defenders.
Lumberjack's Cabin	200	4 days	Produces 144 units of wood per week or 288 copper.
Road	200	16 days	Doubles movement when entering or leaving the Stronghold's hex.
Field *	200	32 days	Produces 280 units of grain once a year (autumn) or 805 copper.
Training Ground	160	4 days	Allows recruiting up to 20 infantry units per week.
Shooting Range	80	4 days	Allows recruiting up to 20 skirmisher units per week.
Quarry	20	4 days	Produces 144 units of stone per week or 72 copper.
Sewer	1120	16 days	Reduces the severity of diseases during a siege.
Tannery	400	4 days	Produces 72 units of leather per week or 252 copper.
Quarters *	1200	16 days	30 soldiers can live comfortably inside the stronghold.
Pantry	520	7 days	Can store up to 5,000 units of food.
Parasade	600	7 days	Defenders Attack First during sieges.
Stable	1560	4 days	Allows recruiting up to 5 cavalry units per week.
Forge	1820	7 days	Produces 72 units of iron per week or 372 copper.
Moat	200	30 days	Reduces the siege dice from battering rams and siege towers by 2.
Orchard *	10	7 days	Produces 10 units of vegetables per week or 5 copper.
Market	235	7 days	The stronghold can buy goods unless it is under siege.
Mine	235	30 days	Produces 144 units of iron ore per week or 288 copper.
Mill	1225	14 days	Produces 72 units of flour per week or 168 copper.
Walls	800	30 days	Defenders Attack First during sieges. Advantage dice +1.
Bakery *	675	7 days	Produces 72 units of food per week or 252 copper.
Pasture *	78	1 día	Produces 72 units of food (milk) per week or 144 copper.
Pigsty *	195	1 día	Produces 36 units of food per week or 96 copper.
Pen	2275	7 days	Produces 72 units of food (bread) per week or 144 copper.
Well	130	14 days	Defenders have access to water even during sieges.
Portcullis	1300	7 days	Reduces siege engine dice (battering rams) by 1.
Sheepfold *	78	1 día	Produces 24 units of wool per week or 91 copper.
Tailor's Workshop	390	1 día	Produces 72 units of cloth per week or 240 copper.
Keep	2400	30 days	Defenders gain +1 advantage die.

* The function can be repeated.

WEEKLY INCOME

Stronghold income is calculated on a weekly basis, as it provides a reasonable timeframe without becoming unmanageable or tedious. If you prefer a longer period, simply multiply the benefits accordingly.

The income listed in the table for resources transformed into other goods already accounts for the loss of the original resource in the process. If the stronghold does not produce the original resource, it should purchase it from a nearby village or rely on a Market.

We understand that this method of generating income for each resource-producing function removes the possibility of a realistic stronghold economy. However, it simplifies management, allowing focus on aspects more engaging for players. Managing each resource separately and dealing with supply and demand logistics would be more immersive but would significantly alter the campaign's objectives and progression.

STOCKPILING SUPPLIES

As mentioned earlier, armies require not only their wages but also food. For this, the stronghold relies on its food production functions.

For a more realistic approach, you can reserve the food units produced as supplies. The simpler option is to convert everything into copper coins and purchase supply units once you tally the total income: each supply unit costs 3 copper coins.

Prudent leaders should keep one or more pantries stocked with supplies to prepare for a siege. If a siege drags on, the pantries will deplete quickly, but it's better than starving.

CONTRIBUTIONS FROM VILLAGES

Strongholds often extend their influence over surrounding lands, offering protection or imposing threats on nearby settlements. Their responsibilities or tensions are often resolved through the payment of tributes.

As armies advance, they frequently pass through villages to request or demand resources and supplies, if they do not outright pillage them.

Consider that villages can contribute a weekly amount

EXAMPLE OF STRONGHOLD INCOME

This is an example of weekly income for a stronghold in copper coins.

FUNCTION	COPPER
Lumberjack's Cabin	288
Quarry	72
Tannery	252
Forge	372
Mine	288
Mill	168
Bakery	252
Pasture	144
Pigsty	96
Inn	144
Sheepfold	91
Tailor's Workshop	240
TOTAL	2407

of supplies equal to three times their population or an amount of copper coins equal to five times their population. This is the acceptable limit within a protection pact or as payment to avoid harm from an army.

EXCESS IN COINS: In the Ravenland, a significant portion of transactions are conducted through bartering, so villages usually do not have a large amount of coins available. If a population is forced to give more coins, it can be pushed to a maximum of ten times its population in copper coins per week.

EXCESS IN SUPPLIES: If they are looted or forced to give more, up to ten times their population in supplies can be taken each week. This will cause starvation and deaths by famine. Roll a D6 based on the supplies demanded, between four and ten times their population: the total is

the percentage of the population that dies from starvation that week. The same applies in cases of looting.

Keep in mind that, depending on the circumstances, some populations may have fewer supplies to offer. Having supplies up to ten times their population is characteristic of very prosperous villages.

DETERIORATION: Populations forced to pay tributes beyond their normal capacities (three times in supplies or five times in coins) will suffer from hunger or poverty, along with increasing resentment toward those imposing such demands. Acceptable tributes are the maximum; it is advisable not to tighten the belt unless necessary to maintain good relations and avoid harming the progress of an already precarious region like the Ravenland.

CONSTRUCTION OF WALLS

Walls are the primary defense of any stronghold. They come at a very high cost but provide advantage dice until they are breached or damaged by attackers.

The base cost for walls is 800 copper, but both height and thickness can be increased, multiplying the cost. With each increment, the number of advantage dice they provide also increases, up to a maximum of +4, representing truly imposing walls.

There is no restriction against building multiple walls for a stronghold, creating defensive sections. Each wall is constructed separately following the same rules.

REPAIRING DEFENSES

When siege engine **ATTACK DICE** succeed in breaching or damaging a stronghold's defenses during a battle, it means one or more sections of the walls need repair.

It is common for defenders to make desperate repairs during the evening and night to prevent their walls from falling and attackers from entering. Often, this is done using the same blocks that have been knocked down.

For each damaged section, you can roll the **BASE DICE** of defending troops (up to a maximum of 10 per section). Each success repairs one advantage die of the wall. This is only possible while the wall's advantage dice have not been reduced to zero during a daily attack, as in such a case, the

enemy army would immediately order an assault to exploit the breach.

Repair costs are typically equivalent to one-tenth of the wall's total cost (80 copper per die) or the equivalent in stone blocks. If the stronghold lacks the funds or materials, repairs cannot be completed, at least not fully.

SALARIES

Controlling a large army in the Forbidden Lands is nearly impossible for one simple reason: the cost is extraordinarily high. The subsistence economy that characterizes most settlements makes maintaining an armed force large enough to dominate these lands an overly ambitious and doomed endeavor.

For this reason, strongholds typically maintain only a small garrison during peacetime, and wars must, by necessity, be very brief. A prolonged war can devastate an entire region, as too many people would be devoted solely to killing each other rather than working to produce food or wealth, relying on those who do.

It is possible that the politics of the Ravenland may gradually evolve into a feudal system, allowing for regional control through bonds of servitude. Even so, the prohibitive costs of armies would remain largely unchanged.

PAYMENT OF SALARIES

As previously mentioned, army units demand salaries in copper coins. Payment is typically expected on a weekly basis rather than daily and can sometimes be made at the end of an entire month. We recommend weekly payments to align with the income calculated from strongholds and tribute collection.

Salary agreements can vary depending on circumstances. Often, warriors are promised everything acquired during the campaign through looting, a predatory promise highly destructive to the civilian population that eventually ruins entire regions.

Another common method is to pay soldiers in full at the end of the campaign, usually at the start of winter. However, this is not well-received by soldiers, as the failure to fulfill such promises is frequent.

There are many possible payment arrangements, but they are typically established during recruitment. Changing the terms with the army mid-campaign is rarely a good idea, as it generates dissatisfaction and distrust, though sometimes it may be the only option.

FAILURE TO PAY

With so many varied salary arrangements, it is impossible to establish a universal rule for what happens when soldiers are not paid their due. Generals may renegotiate payments or make new promises.

When a section of the army realizes they will not receive their rightful payment as agreed, desertion begins. This can manifest as troops abandoning the army or turning against their general in pursuit of revenge or spoils.

Deserters without funds may quickly resort to looting villages, or besieging their former leader until their demands are met.

DISEASE

In sieges, disease is always lurking, affecting both defenders and attackers alike. With many people crowded together, poorly fed, and with little to no hygiene, it is common for various viruses and bacteria to spread almost unchecked.

At the end of each week, roll a D6 for every 100 units in the army (rounding up). If any of the dice result in a 1, disease breaks out in the army. Each 1 in the roll adds one DISEASE DIE.

When disease breaks out, and at the end of each subsequent week, roll the disease dice: each result of 1 kills 10 warriors, while each result of 6 increases the number of disease dice by 1. Any results other than 1 or 6 remove that die without causing any additional effects. The week after a disease disappears (when all its dice are removed), repeat the process to determine whether a new disease breaks out.

When disease breaks out or when a 6 is rolled on the disease dice, besieged strongholds double the total number of disease dice unless they have the Sewer function.

BATTLE EVENTS

Stran feels the tremor in the stone beneath his feet. Another arrow grazes his helmet as an enemy appears at the staircase. Behind him, a wounded man pleads for the breach to be reinforced before it's too late. Outside, the wind lashes the tattered banners; inside, there is only a brief pause. With the heavy shield on his arm, Stran raises his sword, determined that this man will not set foot on the wall.

During battles, violent scenarios unlike any other, characters may find themselves caught in circumstances both intriguing and challenging. These situations will not only test them but may also alter the course of a conflict. In this chapter, we will focus on individual units and the role Important Characters can play in shaping the drama and outcome of a battle.

IMPORTANT CHARACTERS

When we talk about IMPORTANT CHARACTERS, we often think of PCs, however this doesn't have to be a limitation. Many other characters can be important in the context of a battle, recognizable antagonists from the story are the best examples.

It's possible for an enemy who might never otherwise become a notable character to achieve significance through the events of a battle, or for a new character to be created during the battle to add depth to the campaign.

In this way, a game session focused on the development of a battle can be the perfect situation for a new character, previously unknown, to become a pivotal ally or enemy.

With this concept, we aim to emphasize that while established important characters in the campaign should

always shine in a battle for the sake of plot and narrative development, we also encourage you to create new ones when they can bring a fresh and exciting perspective. These characters, who rise from complete obscurity to relevance, often become the most memorable.

IMPORTANT CHARACTER DIE

These characters follow a basic rule in battle corresponding to the advantage die they grant their troop. Their fate, in general terms, is tied to the results of this specific die (in a different color if you wish to apply the rule).

The events in this chapter are considered separate from the destiny determined by the previously explained rules. In any case, characters must face the unique events they encounter during the battle, bearing the wounds caused by the results of their advantage die.

COMMANDERS

Important Characters are not always the commanders of their troop. Sometimes, a champion of the army must serve under the command of an experienced and capable officer.

Imagine a PC with the Rogue profession. In a structured army, it would be natural for them not to hold the rank of troop commander. However, their presence and combat skill

would still grant the troop the corresponding advantage die. Additionally, they would experience battle events that make their participation memorable. Even so, they might lack the appropriate personality to lead soldiers on the battlefield.

With all this explained, we aim to convey that the concepts of commander and important character do not always go hand in hand, though they often will.

EVENTS

At the beginning of each battle turn, important characters engaged in combat must roll a D66 to determine if they will take part in an event. Refer to the corresponding table based on their current situation.

These events may unfold just before the troop's battle roll for the turn or during the resolution of its consequences. (To do so, make the troop roll first and weave the results into the event narrative).

BATTLE EVENTS AGAINST MONSTERS

D66 EFFECT

- | | |
|-------|--|
| 11-36 | The character does not experience any particular event during this battle turn. |
| 41-43 | The monsters let out a roar, scream, or shriek that intimidates the character's troop. The troop loses the important character die and all its Morale points, then must make a Morale roll (roll its base dice, with only 1s applying). To avoid the first effect, the character must succeed in a Demanding INSIGHT roll to overcome the fear, and then succeed in a Demanding PERFORMANCE roll to rally their companions and prevent the second effect. |
| 44-46 | One of the monsters faces the character head-on along with a small group from their troop (1D3+2 units). Resolve the combat in 3 rounds. If the monster becomes BROKEN , the enemy troop loses the corresponding BASE DIE . |
| 51-53 | One of the monsters attempts to separate the character from their allies, circling around and attacking from different angles. A successful MOVE roll can prevent the character from being surrounded. If they fail, they are isolated and suffer an attack with ten base dice. |
| 54-56 | The monsters use the corpses of fallen warriors to instill fear while mocking and provoking their enemies. The character can attempt to punish these monsters to prevent the negative effects they intend to cause. To do so, they must overcome their fear with an INSIGHT roll, approach using a MOVE or ANIMAL HANDLING roll (depending on whether they are on foot or mounted), and finally succeed in a MELEE or MARKSMANSHIP roll. Failing any of the three rolls leaves the character Stunned, and the troop loses the Important Character die and 1D6 points of Morale. |
| 61-63 | The character identifies the figure keeping the monster troop cohesive (use an Important Character or invent one; it could be a monster) and has a unique opportunity to attack them. If they manage an impressive strike (a Formidable roll of MIGHT , MELEE , or MARKSMANSHIP), they cause significant disarray in the enemy troop: it loses as many points of Morale as the successes rolled and must make a Morale roll (roll its BASE DICE , only applying 1s). |
| 64-66 | The monsters initiate a stampede aiming to overrun the character's troop. The character must make a roll of MOVE or ANIMAL HANDLING (depending on whether they are on foot or mounted) against ten base attack dice to avoid being trampled. Each success below the required number deals 1 point of damage. |

Always strive for an engaging narrative that aligns with the character's situation and the broader battle context, even if this requires modifying the event or interpreting the battle roll results in a unique way.

In cases where the regular troop roll results in the

character taking damage according to the Important Character advantage die rules, while simultaneously triggering an event, we recommend ignoring the damage from the earlier rules. Instead, focus solely on resolving the event.

BATTLE EVENTS AGAINST CAVALRY

D66 EFFECT

- | | |
|-------|---|
| 11-36 | The character does not experience any particular event during this battle turn. |
| 41-43 | A renowned rival rider (use an important character or create one) spots the character amidst the chaos and confronts them. The combat will be resolved in 3 rounds or remain inconclusive. If one of the characters is BROKEN , the victor grants their troop 1 advantage die and 1D6 morale points. |
| 44-45 | An enemy rider is unseated. The character can attempt to capture their mount (a creature of remarkable strength and beauty) with a Hard ANIMAL HANDLING roll to continue fighting or make an escape. |
| 46-51 | A cavalry wedge charges at full speed toward the character's position. The character must make an MOVE or ANIMAL HANDLING roll (depending on whether they are on foot or mounted) against ten base dice of attack to avoid being trampled. Each success below the required number causes 1 point of damage. |
| 52-53 | An exceptionally skilled enemy fires from a distance (use an important character or create one). The character can choose to defend, flee, or attack. The encounter will last a maximum of 3 rounds and may remain unresolved. |
| 54 | The enemy commander is forced to dismount (due to an arrow shot or accident). If the character seizes the opportunity, they can kill, capture, or force the commander to flee. If successful, the enemy troop loses all its points of Morale and must make a Morale roll (roll their base dice, only 1s apply). |
| 55 | The cavalry's advance raises a thick cloud of dust. The character must succeed on a Hard SCOUTING roll to avoid losing sight of the enemies and their allies. If they fail, their troop loses the important character die for 1D3 battle turns. |
| 56 | Some riders carry lassos and attempt to immobilize the character. The character must succeed in an opposed MIGHT roll against 12 dice. If the character loses, they are captured by the enemy. |
| 61-62 | The enemy cavalry appears to retreat, luring the character into a chase. If the character decides to pursue, they fall into a planned ambush aimed at capturing them. |
| 63-64 | A section of the enemy cavalry retreats. If the character decides to pursue, their troop gains two bonus dice on their next battle roll (not limited by the base dice). |
| 65 | An enemy messenger rides through the ranks delivering orders. If the character takes them down (a successful ranged attack with a -2 modifier or a Hard MOVE roll to leap onto them), the enemy troop becomes disorganized. The character's troop gains one bonus die on their next battle roll. |
| 66 | Two riders on stunning black steeds blow horns with a terrifying sound, capable of intimidating their enemies. If the character fails to defeat them, their troop loses all its points of Morale and must make a Morale roll (roll their BASE DICE , counting only results of 1). |

BATTLE EVENTS AGAINST INFANTRY

D66 EFECTO

- 11-36 The character does not experience any particular event during this battle turn.
- 41-42 The enemy troop forms a compact shield wall. The character can attempt to break it with a **MIGHT** or **ANIMAL HANDLING** roll (depending on whether they are on foot or mounted) against the troop's Battle roll. If the character succeeds, they create a breach, and their troop's efforts inflict 1 point of damage on the enemy. If they fail, the character suffers Strength damage equal to the enemy's excess successes, and the enemy troop gains two bonus dice while engaged with the character's troop.
- 43-44 The infantry attempts to encircle the character, advancing in a semicircle. The character can make a Challenging **MOVE** roll to escape before being trapped or a Formidable **MIGHT** roll to break through. If they fail, they suffer an attack with 12 base dice and Weapon Damage 1 (piercing).
- 45-46 One of the soldiers is clad in an impressive black armor (use an important character or invent one). The character may choose to face this champion in battle. The fight will be resolved in 3 rounds or remain inconclusive. If one of the characters is **BROKEN**, the winner grants their troop 1 bonus die and 1D6 Morale points.
- 51-52 The infantry advances in a block, pushing with their shields. The character must succeed on a Hard **MIGHT** or **ANIMAL HANDLING** roll (depending on whether they are on foot or mounted) to hold their ground. If successful, they may inspire their troop with a **PERFORMANCE** roll to resist losing ground against the successes rolled from ten base dice by the enemy. The troop with the most successes gains 2 bonus dice for 1D3 battle turns.
- 53-54 An enemy standard bearer bolsters the morale of their troop. If the character manages to take them down (a successful ranged attack with a -2 modifier or a Hard **MOVE** roll to leap at them), the enemy troop becomes disorganized. The character's troop gains 1 bonus die in their next battle roll.
- 55-56 Behind the shield line, a soldier with a bow fires projectiles and leads their troop (use an important character or create one). The character can choose to defend, flee, or attack. The encounter will last a maximum of 3 rounds, possibly remaining inconclusive.
- 61-62 The ground is strewn with corpses and broken weapons. The character must succeed in a **MOVE** roll to avoid tripping. If they fail, the character suffers a terrifying attack with six base dice, and their troop loses its important character die on the next battle roll.
- 63-64 An enemy soldier (use an important character or create one) raises a powerful artifact capable of changing the course of the battle. The character has 3 combat rounds to alter the situation. If they fail, the enemy troop uses a D8/D10/D12 instead of the Important Character die for the remainder of the battle. It is possible that the character may seize the artifact if the Gamemaster considers it appropriate.
- 65-66 The enemy commander orders a disciplined attack. The character can attempt to intimidate them or challenge them to single combat to break their command. Whoever emerges victorious from the interaction grants their troop one bonus die against the enemy troop.

BATTLE EVENTS AS THE ATTACKER IN SIEGES

D66 EFECTO

- 11-36 The character does not experience any particular event during this battle turn.
- 41-42 The defenders fire through arrow slits. The character must organize the nearby soldiers to take proper cover with a **PERFORMANCE** roll. If they fail, the troop takes 1 extra point of damage in the next battle roll, and the character suffers an attack with five base dice.
- 43-44 While the character attempts to climb the wall, boiling water is poured from above. They must make a **MOVE** roll against ten base dice to sidestep and avoid being scalded. The gear cannot protect them, so each success fewer than the enemy's is transferred as damage.
- 45-46 A companion throws a rope with a grappling hook onto the battlement. The character can attempt a **MIGHT** roll to tighten it and prevent the defenders from removing the hook. They must succeed in three rolls against eight base dice from the defenders (can receive help from two companions). If they succeed in all three, the wall loses one advantage die in the following battle rolls. If they fail, the character takes 1D6 Strength damage.
- 51-52 A defender casts spells from the wall (use an important character or create one). The character can attempt a **MARKSMANSHIP**, **MANIPULATION**, or any other roll that allows them to distract the sorcerer from their efforts. If successful, they must fight 3 rounds against the enemy. If they fail, the defending troop gains one advantage die.
- 53-54 The defenders pour boiling oil, injuring several attackers. However, that's not the worst of it: the character sees several archers lighting their arrows in braziers, preparing to set the oil at the foot of the wall aflame. It's a critical moment. If the character decides to try to stop them, they can coordinate projectiles against the archers and shields to prevent enemy arrows from reaching the oil (a Hard **PERFORMANCE** roll). If they fail or choose not to act, the fire and smoke produced remove the defenders' ability to Attack First, but completely wipe out the troop currently attacking.
- 55-56 The defenders throw corpses, logs, or rocks to clear the ladders. The character must make an **MOVE** roll against an attack of ten base dice to sidestep and avoid the impact.
- 61-63 The character spots a poorly defended window or arrow slit with a successful **SCOUTING** or **INSIGHT** roll. If successful, they can slip inside and fight their way across the wall. They must face 1D6 enemies three times: if not **BROKEN**, the defenders become sufficiently distracted for the attackers to climb the wall, causing it to lose its benefit. Warn the character that this action is as heroic as it is suicidal.
- 64-66 The character is the first to scale the wall. They must face 1D6 enemies three times: if not fall **BROKEN**, the defenders are sufficiently distracted for the attackers to climb the wall, causing it to lose its benefit. Each turn the character survives, 1D3 allies climb up to help.

BATTLE EVENTS AS THE DEFENDER IN SIEGES

D66 EFECTO

- 11-36 The character does not experience any particular event during this battle turn.
- 41-42 The enemies throw torches and resin, creating smoke on the wall. The character makes a **PERFORMANCE** roll to keep their companions focused. If they fail, their troop loses the ability to Attack First.
- 43-44 A group of allies is carrying a large pot of boiling water to pour on the enemies climbing the wall, but they are very nervous and hurried. The character must succeed in a **PERFORMANCE** roll to calm and coordinate them or the water will be wasted, causing the troop to lose one advantage die in the next battle roll.
- 45-46 The troop's commander (this could be the character themselves) is wounded (losing 1D6 Strength points, down to a minimum of 1) and needs to be temporarily saved from danger. To do this, the character must make a **PERFORMANCE** roll (to direct their companions) or a **MIGHT** roll (to carry them). If they fail, the troop becomes demoralized, losing 1D6 Morale points, and the enemy gains one advantage die in the next battle roll.
- 51-52 The character sees attackers throwing grappling hooks with ropes to climb. They can attempt to cut them (three **MELEE** or **MIGHT** rolls) or try to get their companions to notice amid the chaos of battle (a Hard **PERFORMANCE** roll). If they fail, the enemy troop gains two advantage dice on the next battle roll.
- 53-54 When a defender carrying a torch to ignite the oil beneath the attackers is struck down by a projectile, the character watches as the torch soars through the air, about to fall into a pot of boiling oil carried by two allies. They can attempt to divert the torch (a Formidable **MARKSMANSHIP** roll or a Hard **MOVE** roll) or warn their allies amid the noise of battle (a Demanding **PERFORMANCE** roll). If they fail, the oil ignites and chaos shakes the defenders: they lose 1D6 Morale and Attack Second in the next battle roll.
- 55-56 An allied messenger arrives with crucial orders but is gravely wounded and unable to deliver them. The character can interpret his signals (Demanding **INSIGHT** roll) or reach him in time to receive the message (Hard **MOVE** roll). If they fail, the enemy troop gains two bonus dice in the next battle roll.
- 61-63 Enemy soldiers have managed to climb the wall, and the character is the one who can prevent the situation from worsening. They must remove the ladder and throw it down with a **MIGHT** roll, but before making that roll, they must first defeat the enemies climbing up. 1D3 enemies have already made it up, and each turn another 1D3 enemies join. The character receives assistance from 1D6 allies. The event ends when the character manages to topple the ladder, falls **BROKEN**, or decides to **FLEE**. If the character cannot topple the ladder, the wall loses its advantage dice in the next battle roll.
- 64-66 A skilled enemy (use an important character or create one) is about to take down the commander of the defending troop. The character can prevent the attack with a Hard **MARKSMANSHIP** roll or push the commander aside with a Hard **MIGHT** or **MOVE** roll if the target is the character themselves. If they fail, the commander is **BROKEN** and the enemy troop gains two advantage dice.
